Letter of intent

ETON Group Sp. o.o. is a technology start-up established in September 2014. The main area of activity is to conduct research on state of the art biosensors, and then their commercialization and coordination of the production process.

We are interested in using techniques performed by amide hydrogen/deuterium (H/D) exchange in solution coupled mass spectrometry (HDXMS) for analyze an interaction between antigens and antibodies of pathogens and oncology markers. We are going to use this information in construction of novel biosensors for detection of pathogens and early stages of oncologic process.
