Letter of support for Mass Spectrometry Laboratory IBB-PAS

With this letter, I wish to express our strong support for the Mass Spectrometry Laboratory, IBB-PAS **call for instrumentation funds**, to purchase the latest generation mass spectrometer, with characteristics of highest sensitivity and scanning speed. These features will enable to gather a paramount amount of information and greatly accelerate the progress of proteomics/metabolomics discoveries.

We had a pleasure to collaborate with Professor Michał Dadlez and his group in various projects related to neurodegeneration and analysis of disease protein complexes in the brain. It is due to their competence, instrumentation capacity and devotion of dedicated staff that these projects were successful and resulted in several peer-reviewed publications of high-impact.

In my opinion, the Mass Spectrometry Laboratory, headed by Professor Dadlez is one of the leading proteomics laboratories in Europe. As it serves as the reference laboratory offering various proteomics analyses in Poland, it is of utmost interest to support such innovative research offered by the laboratory and thus facilitate the development of biomedical sciences in Poland.

Taken together, we **very strongly support** this application and wish to continue our fruitful collaboration.

Sincerely yours,
Maciej Lalowski, PhD
